

Wabtec is a comprehensive, worldwide resource for locomotive needs.

Barber Spring: Offering Locomotive Springs!

Barber Spring combines modern equipment and material handling along with an extensive inventory of steel to offer the finest custom hot wound compression springs for freight locomotives. ISO 9001:2000 and AAR M-114 certified, Barber Spring is dedicated to meeting quality specifications to ensure long, dependable spring service life and to providing fast, efficient service.

Features

- Computer controlled coilers
- Spring capabilities include bar diameters from ½" to 4", outer diameter to 24", and free lengths to 72"
- Load testing to customer specifications
- Non destruction testing on site
- Powder coat and custom colors done in house
- Shot-peening and end surface grinding available upon request

The Wabtec Difference

- We offer the shortest lead times in the industry
- Our automated manufacturing line heats, coils, tempers and tests springs to insure consistent high quality
- Our exclusive tapering system insures a correct taper for precision end-seating, an important factor in maintaining full precision and consistency during production
- Barber Spring has over 60 years of spring manufacturing expertise
- We maintain an extensive steel inventory to ensure prompt production of orders
- Our team can assist in the design or selection of the right spring for your applications
- We offer variable pitch capabilities
